

Baseball short presentation

Today I 'am going to be giving a short presentation on baseball. Let's start with some basics of baseball.

At the picture, right here you can see a diamond-shaped baseball field and the defensive team. The job of all the players on the defensive team except for the pitcher and the catcher is to bring the ball back after it has been launched by the opposite team's batter. The pitcher of course throws the ball to the batter, and the catcher catches it in case the batter misses.

On the other hand the offensive team has to launch the ball as far as they can and score as many runs as possible.

Now let's go over some basic rules of the game. As I mentioned earlier a team has to score runs to win, now just so you know it is the only way for a team to win; the defensive team can't score in any way.

You also need to know that there are 9 innings a game where an inning is a baseball equivalent to a round. In this said inning each team gets one turn at a bat with the turn ending after the third out has been made.

Now an out is when the batter misses the ball for the third time. So after 3 misses there is a strikeout which means one out.

Ok, so this happens when the batter misses, now if he doesn't he drops the bat and starts a base run which he can continue until the defensive team returns the ball. In a case where the batter launches the ball outside of the field the offensive team automatically scores a home run.

Now I will tell you about the biggest baseball tournaments. Let's start with the MLB being most prestigious club baseball tournament and the most prestigious in general, attracting the best players from all across the globe and the most fans.

Second in line is the WBC, the most prestigious international baseball tournament.

Then there is the NPB, Japan's biggest sporting event and the KBO, South Korea's biggest.
